## TOP REASONS TO BUY WÜSTHOF

- Well-balanced and weighted
- Blades are not as hard as Japanese knives which makes it easier to put an edge back on
- Holds a sharp edge
- Our proprietary process "PEtec" is used on all forged lines (Grand Prix II, Legende, Classic, Classic Ikon, Ikon Blackwood)

## History of Wüsthof

Wüsthof-Trident cutlery was first produced two centuries ago at a family-owned factory in the renowned cutlery center of Solingen, Germany. Today, seventh-generation cutlery makers, cousins Harald and Viola Wüsthof take pride in the fact that these premium knives are precision-forged according to the exceptional standards established by their family back in 1814.

Engineered for precision and outstanding performance, this professional-quality cutlery blends modern ingenuity with time-honored tradition. Each Wüsthof knife is crafted according to a meticulous 40-stage process for forged knives and a 14-step process for laser-cut stamped knives, reflecting the combined efforts of over 200 master craftspeople. Blades are precision-forged or laser-cut stamped from a single piece of high-carbon stainless steel to ensure optimal strength, durability and long-lasting sharpness. Contoured handles feel like an extension of your hand, for perfect control with every cut.

## Wüsthof Features

Wüsthof knives are each crafted from a single piece of chromium-molybdenum-vanadium steel with a Rockwell hardness of 58. The company's proprietary steel formula, X50CRMOV15, is etched onto every blade.

- X: Stands for stainless steel
- 50: 0.5% carbon – high-carbon content promotes sharpness
- CR: Chromium provides stain-resistance
- Mo: Molybdenum also enhances stain-resistance
- V: Vanadium ensures blade hardness and edge retention
- 15: Refers to optimal percentage of chromium used in this alloy

## PEtec (Precision Edge Technology)

This exclusive technology reduces blade edge angles for an extraordinary level of sharpness and control. On Wüsthof European-Style knives, the blade edge angle has been reduced to 28 degrees (14 degrees per side), while Asian-style Santoku, Nakiri and Chai Dao knives have a blade edge angle of 20 degrees (10 degrees per side). PEtec is 20% sharper with twice the edge retention.
