**Getting Started - Battery Installation**

1. Slide back the battery door to remove and install 2 AA alkaline or rechargeable batteries into the battery compartment according to the polarity (+/-) instruction. Replace the battery door after the batteries have been installed.
2. Press the Button to reverse the Cutter whenever necessary.
3. Always replace all batteries at once and never mix old and new batteries or batteries of different types.
4. CAUTION: The Cutter may be still operating when replacing the batteries. Always keep your fingers away from the Cutter.

**Operating the Can Opener**

1. Place your Can Opener on top of the can with its rim positioned in the groove between the Cutter and the Clinch Wheel. (Fig. 1)
2. With the can on a flat surface, press the Button for about one second and release. The Can Opener will start cutting the can. (Fig. 2)
3. When the can has been pierced, press the Button immediately to reverse the Cutter. (Fig. 3)
4. Make sure the Cutter reaches the stop position and the motor stops. Then, lift the Can Opener off the can. The Magnet on the Can Opener will pick up the lid as well as for convenience. (Fig. 4)
5. Press and hold the button in start. (Fig. 5)
7. Lift can opener with lid.

**Care and Maintenance**

1. If the Can Opener shows during cutting, this may indicate low battery level and the batteries should be replaced. If the Can Opener stops during operation, see “Trouble Shooting” below.
2. To clean the Cutter, remove the batteries as a safety precaution and remove the front cover. Wipe the Cutter with a damp cloth or a sponge, using a mild non-abrasive cleaner, followed with a clean, dry cloth to dry off completely.

**Trouble Shooting**

1. If the Can Opener is jammed due to low battery level or a deformed can rim, press the Button again to activate the reverse function and the Cutter will reach to the stop position. (Fig. 6)
2. If batteries are depleted, the can may not be released by pressing the Button. In this case, detach the Battery Cover and replace the 2 AA batteries. The Can Opener should continue the cutting. Press the Button again to reach the Cutter to the stop position after cutting is completed. Remember to replace the Battery.
3. Cans with heavy seams and uneven rims may stall the Can Opener. If this happens, follow above procedures to release the can. Start the cutting action just beyond any minor bump or start in a can. (NOTE: The Can Opener will not open mismatch cans or cans with odd seams.
4. Caution: A lid may get stuck in the Cutter after the unit stops. You may pull the lid backwards by your hands and the lid will come free from the Cutter.

---

**Specifications**

- **Dimensions**: 126 x 72 x 68 mm
- **Storage temperature**: -10°C to 40°C (50°F to 104°F)
- **Battery**: 2 AA alkaline or rechargeable batteries

---

**Save These Instructions**

This Can Opener is intended for household use only. Read the following instructions before using for the 1st time.
