IMPORTANT SAFEGUARDS
When using electrical appliances, basic safety precautions should always be followed, including the following:
• Read all instructions.
• Use this appliance only as described in this instruction manual.
  As with any electrical appliance, the instructions aim to cover as many situations as possible. Caution and
  common sense should be used when operating and installing this appliance.
• To protect against fire, electrical shock and personal injury, do not immerse cord, plug or appliance in
  water or other liquid.
• Never allow the appliance to be used by children.
• Unplug from the outlet when not in use and before cleaning. Allow to cool before fitting or taking off
  parts, and before cleaning the appliance.
• Do not operate with a damaged cord or plug, or after the appliance malfunctions, or has been damaged in any
  manner. Return the appliance to the nearest authorized service facility for examination, repair or adjustment.
• The use of accessory attachments or spare parts not recommended by the appliance manufacturer may
  result in fire, electrical shock or personal injury.
• Do not use outdoors.
• Do not let the cord hang over the edge of the table or counter, or touch hot surfaces.
• Do not place on or near a hot gas or electrical burner, or in a heated oven.
• Plug cord into the wall outlet. To disconnect, turn any control to “off”, then remove plug from wall outlet.
• Do not use the appliance for other than the intended use. This appliance is to be utilized for domestic use
  only. Any other use is to be considered improper and therefore, dangerous.
WARNING: To reduce the risk of fire or electric shock, do not remove the exterior of the unit or the cover.
Don’t attempt to repair or modify the machine, doing so will void the warranty. Repair should be done by
authorized service personnel only!
SAVE THESE INSTRUCTIONS
THIS PRODUCT IS FOR HOUSEHOLD USE ONLY
SHORT CORD INSTRUCTIONS
- A short power cord is provided to reduce risks resulting from becoming entangled in or tripping over a
  longer cord.
- Longer, detachable power supply cords or extension cords are available and may be used if care is exer-
  cised in their use.
- If an extension cord is used, the marked electrical rating should be at least as great as the electrical rating
  of the appliance. If the appliance is provided with 3- wire, grounding type cord, the extension should be
  a GROUNDING TYPE 3 - WIRE CORD. The longer cord should be arranged so that it will not drape over the
  counter-top or table top where it can be pulled on by children or tripped over.
- Your product is equipped with a polarized alternating current line plug (a plug having one blade wider
  than the other). This plug will fit into the power outlet only one way. This is a safety feature. If you are un-
  able to insert the plug fully into the outlet, try reversing the plug. If the plug should still fail to fit, contact
  your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the polarized plug.
1. **DESCRIPTION**

### 1.1 Description of the appliance

**Description of the appliance**

- A1. Bean container lid
- A2. Bean container
- A3. Cup tray
- A4. Steam dial
- A5. Hot water spout
- A6. Steam spout
- A7. Frothing wand selection ring
- A8. Frothing wand
- A9. Frothing wand connection nozzle
- A10. Cup grille for espresso
- A11. Cup grille for glasses or mugs
- A12. Drip tray grille
- A13. Drip tray
- A14. Drip tray water level indicator
- A15. Water tank lid
- A16. Water tank extraction handle
- A17. Water tank
- A18. Water softener filter housing
- A19. Power cord connector socket
- A20. Main switch (ON/OFF)
- A21. Boiler outlet
- A22. Coffee mill outlet (tamping station)
- A23. Tamping lever

### 1.2 Description of control panel

**Description of control panel**

- B1. ON/Standby button
- B2. Ground coffee quantity dial
- B3. "X2" button: to use the 2 coffees Easy Clean filter
- B4. Rinse button
- B5. "OK" button: to deliver the beverage/confirm
- B6. Hot water button
- B7. "My" button: to customise beverage quantity
- B8. Mode selector dial:
  - Espresso
  - Americano
  - Coffee
  - Descaling
- B9. Descaling light
- B10. Steam ready light
- B11. Overtemperature light
- B12. Energy saving light
- B13. General alarm light
- B14. Bean container empty/No Bean container light
- B15. No water light
- B16. Tamping light
- B17. Pressure gauge

### 1.3 Description of the accessories

**Description of the accessories**

- C1. Portafilter
- C2. Easy Clean filter 1 coffee
- C3. Easy Clean filter 2 coffee
- C4. "Total Hardness Test" indicator paper
- C5. Descaler
- C6. Water softener filter (*if present)
- C7. Power cord
- C8. Tube brush
- C9. Milk pitcher

2. **PREPARING THE APPLIANCE**

Wash all accessories with warm water and washing-up liquid, then proceed as follows:

1. Insert the Bean container (A2) in the coffee mill (fig. 1). The container is correctly inserted when the arrow is lined up with the symbol and you hear a “click”;
2. Remove the water tank (A17) (fig. 3) and fill with fresh clean water, taking care not to exceed the MAX level (fig. 4).
3. Put the tank back in the appliance.

### Important

Never operate the appliance without water in the tank or without the tank.

### Please note

You should customise water hardness as soon as possible following the instructions in section "12.2 Water hardness".

3. **SETTING UP THE APPLIANCE**

1. Plug the power cord connector (C7) into the socket (A19) at the back of the appliance (fig. 5), then plug the plug into the mains socket. Make sure the main switch (A20) at the back of the appliance is pressed and in the I position (fig. 6);
2. The light corresponding to the button (B6) comes on and the light (B15) flashes to indicate that you need to deliver water to fill the circuit (fig. 7);
3. Place a container with a minimum capacity of 100 ml (3.5 oz) under the hot water spout (A5) and Frothing wand (A8) (fig. 8);
4. Press the button (B6) corresponding to the light (fig. 9). Delivery begins and stops automatically. Empty the container.

**Before using the machine, you must rinse the internal circuits. Proceed as follows:**

5. Attach the portafilter (C1) complete with filter to the appliance. To attach correctly, align the portafilter handle with "INSERT" (fig. 10), then turn the handle to the right until it is aligned in the "CLOSE" position;
6. Place a container under the portafilter and frothing wand (A8) (fig. 11);
7. Press the button (B4) corresponding to the light. Delivery begins (fig. 12);
8. When delivery is complete, turn the steam dial (A4) (fig. 13) and deliver steam for 10 seconds to rinse the steam circuit;
9. Repeat points 7 and 8 until you have delivered at least 1 litre of water (about half the tank);
10. Remove the water tank (A17) (fig. 3), rinse and fill with fresh clean water, taking care not to exceed the MAX level (fig. 4).

The appliance is ready for use.

Please note: We also recommend rinsing the internal circuits if the appliance is not used for a long period.

The first time you use the appliance, you need to make 4–5 cups of coffee before the appliance starts to give satisfactory results. Pay particular attention to the quantity of pre-ground coffee in the filter (C2 or C3) (see instructions in section "4.4 Adjusting the quantity of ground coffee in the filter"). Proceed as described in section "4. Prepare the perfect coffee dose".

4. PREPARE THE PERFECT COFFEE DOSE

4.1 Preparing the coffee grinder
1. Make sure the bean container is correctly inserted and lined up to position “3” (fig. 14) (factory setting);
2. Remove the bean container lid (A1);
3. Place the required quantity of coffee beans in the container (fig. 15);
4. Close the lid, pressing firmly.
5. The first time you use the appliance, make sure the dial (B2) is in the position (default setting).

4.2 Select the coffee grinding (coarse to fine)
The grinding level affects delivery speed and therefore the quality of the coffee extraction.
The first time you use the machine, we recommend using the factory setting (medium grinding, setting “3”) (fig. 14), then if you are not satisfied with the result, adjust the level according to your personal taste and the type of coffee by setting a finer (setting “1”) or coarser grinding level (setting “6”), referring to the tips in section "4.4 Adjusting the quantity of ground coffee in the filter".

Important: Always adjust the coffee grinder while in operation.
- Adjust one grinding level at a time and make at least 5 coffees before adjusting again.
- Do not remove the bean container while it contains beans.
- If you want to use a flavored coffee, please use preground coffee in the portafilter as opposed to flavored beans. See section "7. Using pre-ground coffee".

4.3 The coffee filters
The appliance is provided with two coffee filters.
The 1 coffee filter (C2) has the symbol marked on the bottom.
The 2 coffee filter (C3) has the symbol marked on the bottom.
For the perfect coffee dose, the ideal level of tamped coffee is marked inside the filters (fig. 16). If the quantity is above or below the level indicated, the result may not be satisfactory. The next times you use the coffee grinder, you can adjust the grinding level using the dial (B2) (see section "4.4 Adjusting the quantity of ground coffee in the filter").

4.4 Grind the coffee directly into the filter
1. Place the ground coffee filter (C2) or (C3) in the portafilter (C1) (fig. 17);
2. Press the “X2” button if you are using the 2 coffee filter;
3. Attach the portafilter to the outlet of the coffee grinder (A22), aligning it with "INSERT", then turning it to the right (fig. 18). Grinding begins when the portafilter reaches the CLOSE position and stops automatically.

Important: while the appliance is grinding coffee, you can perform a rinse, or produce hot water or steam at the same time.
4. Once grinding is complete, the light (B16) flashes. Pull the tamping lever (A23) as far as it will go. The force exerted on the coffee is indicated on the lever itself (fig. 19). The light remains on steadily.
5. Remove the portafilter by turning it towards the left.

Important:
- To adjust the correct quantity ground automatically into the portafilter, see section "4.4 Adjusting the quantity of ground coffee in the filter".
- A second grinding cycle could begin if portafilter is removed before grinding cycle is completed and portafilter reinserted.

If you remove the portafilter from the outlet of the coffee grinder without tamping the coffee, the light (B16) flashes. To press, turn the dial (B2) to the position to disable the coffee mill, re-attach the portafilter and pull the lever (A23).

4.5 Adjusting the quantity of ground coffee in the filter

Important: The first time you use the coffee grinder, leave the ground coffee quantity dial (B2) in the (min) position. It is normal for you to have to grind the coffee a number of times before finding the correct adjustment for the perfect coffee dose.
After grinding coffee for the first time, turn the dial gradually, starting from the "min" position (see following figure) until you reach the correct quantity, depending on the type of coffee. The ideal position is within the sector shown in grey in the following figure.

By adjusting this dial, you can adapt the grinding to any type of coffee and to wear of the burrs over time.

4.6 Grinding adjustment over time
Over time, the burrs will wear down and the quantity of ground coffee will diminish. If you are unable to achieve the ideal quantity of coffee outlined in section "4.4 Adjusting the quantity of ground coffee in the filter" even after turning the dial (B2) to + position, contact De’Longhi Customer Service who will guide you to reach the perfect dose again (see "www.delonghi.com").

5. COFFEE DELIVERY

5.1 Beverage selection
1. Turn the mode selector dial (B8) to select the desired coffee (see section "5.4 Coffee beverages").
2. If you use the 2 cup filter (C3), press the "2X" button (B3).

5.2 Delivering the coffee
1. Attach the portafilter (C1) to the appliance. To attach correctly, align the portafilter handle with "INSERT" (fig. 10), then turn the handle to the right until it is aligned in the "CLOSE" position;
2. Place the cup or cups under the portafilter spouts;
3. If you are using small cups, lower the cup grille (A10) to bring the portafilter spouts nearer the cup. This makes a better crema (fig. 20);
4. Using the dial (B8), select the desired beverage.
5. Press the "OK" button. The appliance makes the coffee then stops automatically.

Please note: While the machine is making coffee, delivery can be interrupted at any moment by pressing the "OK" button. To remove the portafilter, turn the handle from right to left.

Danger of burns
• To avoid splashes, never remove the portafilter while the appliance is delivering coffee. Wait for a few seconds after delivery.
• If no coffee is delivered, then wait for about 1 minute before removing the portafilter. There could be a puff of steam caused by the residual pressure inside the appliance.

5.3 Pressure gauge
The pressure gauge enables you to check that pressure is correct while the coffee is being delivered (fig. 21). While making ESPRESSO coffee, the indicator will initially be in the "pre-infusion" sector and will then rotate to the "optimal zone" during delivery.

For more information, see section "16. How to make perfect coffee".

Important:
• The pressure gauge only operates while coffee beverages are being made. If you are preparing hot water "\(\mathbb{R}\)" or using the steam function, the pressure gauge indicator does not move.
• If the indicator goes on the red sector (over-pressure level):
  - be sure that the coffee filter is thoroughly cleaned;
  - check the quantity of ground coffee in the filter: never exceed the mark impressed in the filter (perfect dose).

5.4 Coffee beverages
• ESPRESSO
Beverage of Italian origin, a short coffee with an intense aroma.
Always check that there is the right amount of coffee in the filter (see section "4.4 Adjusting the quantity of ground coffee in the filter").

• **COFFEE**
  Beverage of European origin, a long coffee with a delicate aroma.

<table>
<thead>
<tr>
<th>Coffee</th>
<th>Pre-infusion</th>
<th>Quantity</th>
<th>Filter</th>
<th>x2</th>
</tr>
</thead>
<tbody>
<tr>
<td>C1</td>
<td></td>
<td>1 cup 2.4 fl oz / 70 ml</td>
<td>C2</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>2 cups 4.7 fl oz / 140 ml</td>
<td>C3</td>
<td>✓</td>
</tr>
</tbody>
</table>

Always check that there is the right amount of coffee in the filter (see section "4.4 Adjusting the quantity of ground coffee in the filter").

• **AMERICANO**
  Beverage of American origin, a long coffee. Made by delivering an espresso, followed by hot water added directly to the cup. Only one cup can be made at a time.

<table>
<thead>
<tr>
<th>Coffee</th>
<th>Pre-infusion</th>
<th>Quantity</th>
<th>Filter</th>
<th>x2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Americano</td>
<td>✓</td>
<td>1 cup 4.1 fl oz / 120 ml</td>
<td>C2</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>RECOMMENDED: 1 cup 8.1 fl oz / 240 ml</td>
<td>C3</td>
<td>✓</td>
</tr>
</tbody>
</table>

Always check that there is the right amount of coffee in the filter (see section "4.4 Adjusting the quantity of ground coffee in the filter").

6. **CUSTOMISING THE VOLUME OF COFFEE BEVERAGES WITH THE **(B7)**

1. Prepare the appliance to deliver 1 or 2 cups of the coffee beverage you want to make, as far as attaching the portafilter (C1) complete with the (C2) or (C3) filter and ground coffee.
2. Turn the dial (B8) to select the coffee to be programmed.
3. Press the (**B7**) button: the light corresponding to the "OK" button (B5) comes on steadily and the light corresponding to the (**B7**) button flashes.
4. Press the "OK" button to start delivering the beverage. The lights corresponding to the "OK" and (**B7**) buttons flash.
5. When you have reached the desired quantity of the beverage, press the "OK" button again.
6. Press the (**B7**) button to save the new setting. The appliance is ready for use again and the (**B7**) button remains on.

If you do not want to save the new setting, press any other button.

Programming Americano coffee: follow the procedure described above for the quantities of both coffee and hot water.

**Please note:**
- You can programme coffee beverages, but not steam and hot water.
- Programming changes the quantity of the beverages, but not the amount of coffee ground.
- "X2" beverages can be programmed separately.

6.1 **Beverage reset (B7)**

To reset the default beverage quantities, press and hold the (**B7**) button until it goes off. The selected beverage is reset to the default values.

7. **USING PRE-GROUND COFFEE**

1. Place the ground coffee filter (C2) or (C3) in the portafilter (C1) (fig. 17);
2. Place the quantity of ground coffee in the filter;
3. Turn the dial (B2) to the position to disable the coffee mill;
4. Attach the portafilter to the outlet of the coffee mill (A22), aligning it with "INSERT", then turning it to the right (fig. 10).
5. Pull the tamping lever (A23) as far as it will go. The printing on the lever indicates the tamping force exerted (fig. 19).
6. Remove the portafilter by turning it towards the left.

8. **DELIVERING HOT WATER**

1. Choose the cup and place it on the correct cup grille ((A10) or (A11)).
2. Press the (**B6**) button: the appliance delivers hot water from the spout (A5) then goes off automatically.
3. To interrupt delivery, press the (**B6**) button again.

9. **HOW TO MAKE MILK-BASED BEVERAGES**

1. Pour the quantity of milk you want to heat/froth into the milk jug (C9), remembering that the volume of milk doubles or triples in volume. For a denser more even froth, you
should ideally use milk at refrigerator temperature (about 5°C).

2. Choose the position of the ring (A7) (fig. 22) according to the beverage to be prepared (see following table):

<table>
<thead>
<tr>
<th>Recommended position</th>
<th>Milk beverage to be prepared</th>
</tr>
</thead>
<tbody>
<tr>
<td>FLAT</td>
<td>Hot milk (not frothed) / Caffelatte / Macchiato / Flat White</td>
</tr>
<tr>
<td>FOAM</td>
<td>Cappuccino, Espresso Macchiato, Hot Milk (frothed)</td>
</tr>
</tbody>
</table>

3. Place the jug (C9) containing the milk under the frothing wand (A8) (fig. 23).
4. Immerse the frothing wand in the milk jug. Never immerse the black ring (fig. 24).
5. Turn the dial to the \(\bigcirc\) position (fig. 25). Steam to heat the milk is delivered from the frothing wand. If the ring is in the FOAM position, the steam gives the milk a creamy frothy appearance (fig. 26). To obtain a creamier froth, immerse the frothing wand in the milk and rotate the container with slow up and down movements.
6. When the required temperature (the ideal is 60°C/140°F) and froth density is reached, interrupt steam delivery by turning the dial to the \(\bigcirc\) position.
7. For beverages requiring it, prepare the coffee (see section “4. Prepare the perfect coffee dose”). Choose sufficiently large cups and place them on the espresso cup grille (A10). To use tall glasses, close the espresso cup grille (A10) and rest the glass on the cup grille for glasses or mugs (A11).
8. Pour the frothed milk into the cups. Sweeten to taste and if desired, sprinkle the froth with a little cocoa powder.

Please note: Preparing cappuccino: consider about 100 g (3.3 fl oz) of milk for each cup.

9. Push the ring upwards and make sure the two holes shown by the arrows in fig. 29 are not blocked. If necessary, clean with a pin;
10. Replace the connection nozzle, move the ring downwards and put the frothing wand back on the nozzle, turning it and pushing it upwards until it is attached.

For more thorough cleaning, use De’Longhi detergent.

11. ACTIVATING THE WATER SOFTENER FILTER

Certain models are fitted with a water softener filter (C6). If this is not the case with your model, you are recommended to purchase one from De’Longhi Customer Services.

To use the filter correctly, follow the instructions below.
1. Remove the filter from the packaging;
2. Turn the date indicator disk (fig. 30) until the next 2 months of use are displayed;

Please note: The filter lasts about two months if the appliance is used normally. If the coffee machine is left unused with the filter installed, it will last a maximum of 3 weeks.

3. To activate the filter, run tap water through the hole in the filter (fig. 31) until water comes out of the openings at the side for more than a minute;
4. Extract the tank (A17) (if necessary fill with water);
5. Insert the filter in the water tank and immerse it completely for about ten seconds, sloping it and pressing it lightly to enable the air bubbles to escape (fig. 32);
6. Place the filter in the filter housing (A18) and press as far as it will go. Close the tank, then put the tank back in the machine;

The filter is now active and you can use the coffee machine.

12. MENU SETTINGS

Please note: Once in the menu, you can modify all the menu functions as described in the following sections.

12.1 Coffee temperature

To change the temperature of the water used to make the coffee, proceed as follows:
1. Press and hold the \(\times 2\) (B3) and \(\bigcirc\) (B7) buttons together for at least 3 seconds to access the menu. The \(\bigcirc\) (B15) and \(\bigcirc\) (B16) lights alternate;
2. Turn the mode selection dial (B8) to the \(\bigcirc\) ESPRESSO position. The \(\bigcirc\) light (B11) remains on steadily;
3. Press the button corresponding to the desired selection as shown in the following table:

<table>
<thead>
<tr>
<th>Button</th>
<th>Temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>(\times 2)</td>
<td>Standard</td>
</tr>
<tr>
<td>(\bigcirc)</td>
<td>High</td>
</tr>
</tbody>
</table>
4. Press the \(\bigcirc\) button (B1) to exit the menu. (If the appliance is left idle for about 1 minute, it exits automatically from the settings menu and returns to regular use mode).
12.2 Water hardness

The desccale light (B9) comes on after a period of time established according to water hardness. The machine can also be programmed according to the actual hardness of the water supply in the various regions, in which case descaling may be required less frequently.

Proceed as follows:

1. Remove the "TOTAL HARDNESS TEST" indicator paper (C4) from its pack.
2. Immerse the paper completely in a glass of water for one second.
3. Remove the paper from the water and shake lightly. After about a minute, 1, 2, 3, or 4 red squares form, depending on the hardness of the water. Each square corresponds to one level.
4. Press and hold the \( \times 2 \) (B3) and (B7) buttons together for at least 3 seconds to access the menu. The (B15) and (B16) lights alternate;
5. Turn the mode selection dial (B8) to the \( \text{AMERICANO} \) position. The light (B9) remains on steadily;
6. Press the button corresponding to the desired selection as shown in the following table:

<table>
<thead>
<tr>
<th>Total Hardness Test result</th>
<th>Button</th>
<th>Level</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Soft Water" /></td>
<td>( \times 2 )</td>
<td>1 soft water</td>
</tr>
<tr>
<td><img src="image" alt="Medium Water" /></td>
<td>(B6)</td>
<td>2 medium water</td>
</tr>
<tr>
<td><img src="image" alt="Hard Water" /></td>
<td>(OK)</td>
<td>3 hard or very hard water</td>
</tr>
</tbody>
</table>

7. Press the \( \cup \) button (B1) to exit the menu. (If the appliance is left idle for about 1 minute, it exits automatically from the settings menu and returns to regular use mode).

12.3 Auto-off

Auto-off can be set so that the appliance goes off after 9 minutes, one and a half hours, or three hours. Proceed as follows:

1. Press and hold the \( \times 2 \) (B3) and (B7) buttons together for at least 3 seconds to access the menu. The \( \text{AMERICANO} \) and (B16) lights alternate;
2. Turn the mode selector dial (B8) to the \( \text{COFFEE} \) position: The light (B13) remains on steadily;
3. Press the button corresponding to the desired selection as shown in the following table:

<table>
<thead>
<tr>
<th>Button</th>
<th>Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>( \times 2 )</td>
<td>9 minutes</td>
</tr>
<tr>
<td>(B6)</td>
<td>1.5 hours</td>
</tr>
<tr>
<td>(OK)</td>
<td>3 hours</td>
</tr>
</tbody>
</table>

4. Press the \( \cup \) button (B1) to exit the menu. (If the appliance is left idle for about 1 minute, it exits automatically from the settings menu and returns to regular use mode).

12.4 Default values

The appliance can be reset to the default values. Proceed as follows:

1. Press and hold the \( \times 2 \) (B3) and (B7) buttons together for at least 3 seconds to access the menu;
2. Press and hold the (B10) button for a few seconds until the corresponding light starts flashing;
3. Press the \( \cup \) button (B1) to exit the menu. (If the appliance is left idle for about 1 minute, it exits automatically from the settings menu and is ready for use again).

12.5 Energy saving

Use this function to enable or disable energy saving. When enabled, the function reduces energy consumption in compliance with European regulations.

Proceed as follows:

1. Press and hold the \( \times 2 \) (B3) and (B7) buttons together for at least 3 seconds to access the menu;
2. Press the \( \cup \) button (B6). The light (B12) comes on;
3. Press the \( \cup \) button (B1) to exit the menu. (If the appliance is left idle for about 1 minute, it exits automatically from the settings menu and is ready for use again).

Please note:
- If energy saving mode is active, you may have to wait a few seconds before delivery.
- When energy saving mode is disabled, steam is delivered immediately.

13. CLEANING

13.1 Cleaning the machine

The following parts of the machine must be cleaned regularly:
- drip tray (A13) complete with cup grille (A11) and drip tray grille (A12);
- espresso cup grille (A10);
- coffee filters (C2) and (C3);
- the bean container (A2);
- the coffee grinder burrs;
- the coffee grinder outlet (A22) (smart tamping station);
- boiler outlet (A21);
- water tank (A17);
- frothing wand (A8) as described in section "10. Cleaning the frothing wand after use".

12
**Important!**

- Do not use solvents, abrasive detergents or alcohol to clean the coffee machine.
- Do not use metal objects to remove residues or coffee deposits as they could scratch metal or plastic surfaces.
- None of the components of the appliance can be washed in a dishwasher with the exception of the drip tray (A13) and cup grilles (A10) and (A11).
- If the appliance was not used for more than a week, before using it again, we recommend you perform a rinse cycle as described in section “3. Setting up the appliance”.

**Danger!**

- While cleaning, never immerse the coffee maker in water. It is an electrical appliance.
- Before cleaning the outside of the appliance, turn it off, unplug from the mains socket and allow to cool.

13.2 Cleaning the drip tray

The drip tray is fitted with a level indicator (A14) showing the amount of water it contains. Before the indicator protrudes from the cup tray, the drip tray must be emptied and cleaned, otherwise the water may overflow the edge and damage the appliance, the surface it rests on or the surrounding area.

1. Remove the drip tray (fig. 33).
2. Remove the cup grille (A11), drip tray grille (A12) and level indicator (A14), empty the water and clean all the components with a cloth, then reassemble the drip tray.
3. Put the drip tray back in place.

13.3 Cleaning the espresso cup grille

1. Extract the grille (A10) by pulling it from the left, then removing it from the support (fig. 34).
2. Rinse the filters under running water (fig. 39).
3. Make sure the holes are not clogged. If necessary, clean with a pin or needle (fig. 39-40).
4. Dry all the components with a cloth.
5. Put the perforated filter back in the housing and press as far as it will go (fig. 37).

13.4 Coffee filter cleaning and maintenance

The coffee filters are designed to obtain the best possible coffee froth. For best results, the filters must always be clean and free from all coffee residues.

After using the appliance, always rinse the filters under abundant running water (fig. 36), pushing the perforated filter to make sure it is always correctly inserted in its housing (fig. 37); make sure the hole underneath (shown in fig. 40) is free from all residues.

2. Clean the support with a cloth and wash the grille (dishwasher safe).
3. Put the grille back on the support from the right side, then push until it is correctly attached (fig. 35).

If still dirty, and in any case always at least once a month, clean the coffee filters thoroughly:

1. Remove the perforated filter from filter housing by pulling the tab (fig. 38).
13.5 Cleaning the boiler outlet
After every 200 coffees, rinse the boiler outlet. Press the rinse button (B4) and deliver about 200 ml/6.76 fl oz of water.

13.6 Cleaning the water tank
1. Remove the filter (*if present) and rinse with running water.
2. Clean the water tank regularly (about once a month) and whenever you replace the water softener filter (C6) (*if present) with a damp cloth and a little mild washing up liquid, then rinse thoroughly.
3. Replace the filter (*if present), fill the tank with fresh water and replace the tank.
4. (Models with water softener filter only) Deliver about 100 ml/3.4 fl oz of water.

Danger!
While cleaning, never immerse the coffee maker in water. It is an electrical appliance.

13.7 Cleaning the bean container
Without extracting it, clean the bean container regularly with a cloth.
For more thorough cleaning, proceed as follows:
1. Make sure the bean container (A2) is empty. If necessary, operate the coffee mill without beans to empty it.
2. Release the bean container by turning it counterclockwise and extract from the appliance.
3. Wash the container and lid (A1) with warm water. Do not wash the components in a dishwasher or use washing up liquid! Dry all accessories thoroughly before using again.
4. Remove coffee residues (fig. 41);
5. Clean the bean container housing with a damp cloth and dry;
6. Put the container back as described in section "3. Setting up the appliance".

13.8 Cleaning the burrs
When cleaning the bean container, clean the container housing and upper burr with a damp cloth. The burr can be removed and replaced when worn. Contact an authorised customer services centre.
You may also need to remove the burr if it becomes blocked with foreign matter. If this occurs, clean as follows:
1. Empty the bean container (if necessary, using a vacuum cleaner to remove any remaining beans).
2. Attach the portafilter and operate the grinder without beans to free the coffee guide, then attach the portafilter to the outlet of the coffee grinder (A22), lining it up with "INSERT", then turning it to the right (fig. 18). Grinding begins when the portafilter reaches the CLOSE position and stops automatically;
3. Turn the appliance off;
4. Remove the bean container as described in the previous section "13.7 Cleaning the bean container".
5. Turn the fineness selector counterclockwise as far as it will go to the "REMOVE" position (fig. 42).
6. Extract the upper burr, gripping it by the handle (fig. 43).
7. Clean the burr with a brush (fig. 44) and remove the coffee residues using a vacuum cleaner (fig. 41).
8. Put the upper burr back in place:
Insert the burr in its housing (fig. 45);

Turn the selector to select the desired grinding level (fig. 46);

Make sure the burr is inserted correctly by pulling it by the handle. If it is correctly inserted, it will not move;

9. Use a brush to remove any coffee residues from the outlet of the coffee grinder (A22).

13.9 Replacing the burrs

Over time, the burrs will wear down. If you are unable to achieve the ideal quantity of coffee outlined in section "4.5 Adjusting the quantity of ground coffee in the filter", contact De’Longhi Customer Service (see “www.delonghi.com”).

13.10 Cleaning the “Smart tamping station”

To guarantee top quality grinding, clean the “Smart tamping station” regularly as follows:

1. Clean the attachment area with a brush (fig. 7).

2. Pull the lever (A23) as far as it will go and clean the presser cylinder with a brush (fig. 48). Then release the lever.

3. Use the tube brush (C8) to clean the coffee guide (fig. 49).

13.11 Other cleaning operations

1. Do not use solvents or abrasive detergents to clean the coffee maker. Use a soft damp cloth only.

2. Clean the portafilter cup.

3. You are recommended to use De’Longhi detergent.

14. DESCALING

Descale the appliance when the [ ] light (B9) comes on.

• Before use, read the instructions and the labelling on the descaler pack.

• It is important to use De’Longhi descaler only. Using unsuitable descaler and/or performing descaling incorrectly may result in faults not covered by the manufacturer’s guarantee.

Proceed as follows:

1. (IF PRESENT, REMOVE THE WATER SOFTENER FILTER). Pour the descaler into the tank up to the level A marked inside the tank (equal to one 100ml/3.3 fl oz packet), then add water (litre) up to the level B .

2. If the appliance is off, press the ON/Standby button (B1).

3. Make sure the portafilter is not attached and position a recipient under the spouts (A5), (A6) and the boiler outlet (A21) (fig. 8).

4. Turn the mode selector dial (B8) to the position. The light flashes and the ”OK” light comes on.

5. Press ”OK” (B5) to start descaling.

6. The descale programme starts and the descaler liquid comes out of the spouts and boiler outlet. The descale programme removes limescale deposits from inside the appliance by automatically performing a series of rinses and pauses until the tank is empty.

7. Delivery stops and the (B15) and lights corresponding to the rinse button (B4) come on.

8. Empty the recipient used to collect the descaler solution and replace it empty under the spouts.

9. Remove the water tank, empty any residues of descaler solution, rinse with running water and fill with fresh water up to the MAX level. Put the tank back in its housing.
10. Press the button. The appliance rinses the internal circuits and delivers water from all three spouts.
11. When rinsing is complete, delivery stops. All the LEDs flash briefly and the appliance prepares to be used again.
12. Empty the recipient used to collect the rinse water.
13. Extract and empty the drip tray, then put back in the appliance.
14. Extract the tank, fill with fresh water, then put back in the appliance.
15. Turn the mode selector dial to one of the coffee positions.

</table>
| If you want to change the type of coffee | You must remove all the beans present in the machine | • Empty the bean container (if necessary, operate the coffee mill without beans or use a vacuum cleaner to remove any remaining beans).  
• Attach the portafilter and operate the coffee mill a number of times without beans to free the coffee guide. Attach the portafilter to the outlet of the mill (A22), lining it up with "INSERT", then turning it to the right (fig. 22). Grinding begins when the portafilter reaches the CLOSE position and stops automatically. Repeat until the filter is empty.  
• Place the new coffee in the bean container.  
• If the amount of coffee ground is not enough to reach the "perfect quantity", proceed as described in section "4.4 Adjusting the quantity of ground coffee in the filter". |
| After grinding, the coffee filter is empty | The coffee mill coffee guide is clogged | Clean as described in section "13.10 Cleaning the "Smart Tamping Station". If the problem persists, access the guide by opening the hatch and free it using the brush (fig. 50). |
| After grinding, there is too much coffee in the filter | The "Smart Tamping Station" needs cleaning | Clean as described in section “13.11 Cleaning the “tamping station”, then grind again. |
| After grinding, the ground coffee in the filter does not reach the “perfect amount of coffee” | The quantity of ground coffee needs adjusting | Adjust the quantity of coffee with the dial (B2), following the instructions in section "4.4 Adjusting the quantity of ground coffee in the filter". If the dial is already in the max. position, contact De’Longhi Customer Service who will guide you to reach the perfect dose again (see "www.delonghi.com") |
| Over time the burrs wear down | | Contact De’Longhi Customer Service who will guide you to reach the perfect dose again (see "www.delonghi.com") |
