IMPORTANT SAFEGUARDS

When using electrical appliances, basic safety precautions should always be followed including the following:

1. Read all instructions.
2. To protect against risk of electrical shock do not put the food processor base in water or other liquid.
3. This appliance is not intended for use by persons (including children) with reduced physical, sensory, or mental capabilities, or lack of experience and knowledge, unless they are closely supervised and instructed concerning use of the appliance by a person responsible for their safety. Close supervision is necessary when any appliance is used by or near children. Children should be supervised to ensure that they do not play with the appliance.
4. Unplug from outlet when not in use, before putting on or taking off parts, and before cleaning.
5. Avoid contacting moving parts.
6. Do not operate any appliance with a damaged cord or plug or after the appliance malfunctions, or is dropped or damaged in any manner. Return appliance to the nearest Authorized Service Facility for examination, repair or electrical or mechanical adjustment.
7. The use of attachments not recommended or sold by the manufacturer may cause fire, electric shock or injury.
8. Do not use outdoors.
9. Do not let cord hang over edge of table or counter or touch hot surfaces.
10. Keep hands and utensils away from moving blades or discs while processing food to reduce the risk of severe injury to persons or damage the food processor. A scraper may be used but must be used only when the food processor is not running.
11. Blades are sharp! Handle carefully.
12. To reduce the risk of injury, never place cutting blade or discs on base without first putting bowl properly in place.
13. Be certain cover is securely locked in place before operating appliance.
15. Do not attempt to defeat the cover interlock mechanism.
16. This product is designed for household use only.
17. Do not use the appliance if the rotating sieve is damaged.
18. Sharp blade - Always use food pusher.
19. Moving Parts - Keep fingers out of feed and discharge openings.
20. Sharp Blade - Never use slicer unless completely assembled.
21. Do not place on or near a hot gas or electric burner or on a hot oven.
22. Turn the appliance OFF, then unplug from the outlet when not in use, before assembling or disassembling parts and before cleaning. To unplug, grasp the plug and pull from the outlet. Never pull from the power cord.
23. Do not use appliance for other than intended use.
24. Never add to container while appliance is operating.
25. Always make sure juicer is clamped securely in place before motor is turned ON. Do not unfasten clamps while juicer is in operation.
26. Be sure to turn switch to OFF position after each use of your juicer. Make sure the motor stops completely before disassembling.
27. Do not put your fingers or other objects into the juicer opening while it is in operation. If food becomes lodged in opening, use food pusher or another piece of fruit or vegetable to push it down. When this method is not possible, turn the motor OFF and disassemble the juicer to remove the remaining food.
28. Unplug before cleaning and before assembling or removing parts. Do not fill the bowl above the marking maximum fill line (or rated capacity) to avoid risk of injury due to damage to the cover or bowl.
29. **For chrome plated models only**: To reduce the risk of electric shock, this equipment has a grounding type plug, with a third (grounding) pin. This plug will only fit into a grounded outlet. If the plug does not fit into the outlet, contact a qualified electrician to install the proper outlet. Do not change the plug in any way.
CAUTION : To ensure continued protection against risk of electric shock connect to properly grounded outlets only.

**SAVE THESE INSTRUCTIONS**

**ELECTRICAL WIRING**

**FOR USA AND CANADA ONLY**

For all other models: To reduce the risk of electric shock, this equipment has a polarized plug (one blade is wider than the other). This plug will fit in a polarized outlet only in one way. If the plug does not fit fully in the outlet, reverse the plug. Do not change the plug in any way. If it still does not fit, contact a qualified electrician.
The electrical rating listed on the unit is based on the attachment that draws the greatest load.
Other attachments might draw significantly less power or current.

*Depending on the model

(1) For greater stability, thread the power cord through the notches on the underside of the motor unit.
CONTROL PANEL

STOP : press this button to switch the machine off.

AUTO : press this button to process in continuous mode and obtain a more even texture. Ideal for fine chopping, mixing or blending, as well as for kneading, beating egg whites, slicing or grating.

PULSE : press this button for intermittent processing. The machine automatically switches itself off as soon as you release this button, giving you complete control over the task from start to finish. Ideal for coarse chopping or mixing.
For preparations such as soups and purées, start off using the pulse button, then switch to continuous mode (AUTO), you will achieve a smoother consistency.
1 pulse = keep the PULSE button pressed down for 1-2 seconds and release.

Never unlock the lid without pressing the STOP button first. Your appliance is fitted with a thermal failsafe that automatically switches the motor off if it is overloaded or has been running for too long.
If it is activated, press the STOP button and wait until the machine has cooled down completely before switching it on again.

⚠️ Total weight and amounts calculated for the main bowl.
Wash all the parts thoroughly (except the motor unit) before using your appliance for the first time.

1. Place the lid on top of the bowl and turn in a counterclockwise direction until it locks into place.
2. Place the bowl on the motor unit and turn in an anticlockwise direction to lock into place.
3. Slide the midi bowl onto the motor shaft, inside the main bowl.
4. Slide the mini bowl onto the motor shaft.
5. Fit the mini blade onto the motor shaft inside the Mini bowl.
6. Place the lid on top of the bowl and turn in a counterclockwise direction until it locks into place.

**WARNING**

- Triple protection: your appliance will only work if both the bowl and lid are correctly locked into place, and if the bottom of the double pusher is level with the MAX level indicator (p. 15).
- Do not leave the lid in the locked position when the machine is not in use.
REMOVING THE BOWLS

1. Unlock the lid by turning clockwise and lift it off.

2. Lift the mini bowl out.

3. Remove the blade from the mini bowl.

4. Lift the midi bowl out, holding it by the rim.

5. Release the main bowl by turning it clockwise. You can now remove it.

WARNING

- Always handle the discs and metal blades with caution, as they are extremely sharp.
- Never unlock the lid unless you have pressed the STOP button first. If the bowl will not move, check that the lid has been unlocked.
STANDARD ACCESSORIES

**MINI BOWL**: equipped with a metal blade for blending, chopping, mixing and emulsifying small amounts.

**MIDI BOWL**: a practical, easy-clean bowl specially designed for use with the discs.

**METAL BLADE**: used in the main bowl for mincing, blending, emulsifying, chopping. **BlenderMix**: designed to ensure a smoother, creamier finish when blending soups and other liquids.

**DOUGH BLADE**: used in the main bowl for mixing and kneading leavened or unleavened dough.

**DISCS**: used in the midi bowl for grating or slicing fruit, vegetables or cheese in two different thicknesses (2mm and 4mm).

**WHISK**: used in the main bowl to whip cream or beat egg whites for meringues, mousses, soufflés, etc.
**METAL BLADE**

**CHOPS** meat, fish and fresh herbs in either PULSE or continuous mode (AUTO).

**EMULSIFIES** sauces, crushes ice, and chops chocolate and sugar to a powder in continuous mode (AUTO).

1. Place the metal blade on the motor shaft. It needs to be at the bottom of the bowl.

2. Place the ingredients in the bowl, put the lid on and turn it anticlockwise until it locks into position.

**BlenderMix** (depending on the model)

**BLENDS** soups, milkshakes, cake mixtures, pancake batter, etc.

Process in continuous mode for 1-4 minutes.

1. Fit the metal blade on the motor shaft. Put the ingredients in the bowl. Slot the BlenderMix into the bowl. Turn the lid until it locks into position.

The BlenderMix attachment should only be used with the metal blade.

The metal blade is extremely sharp. Always hold it by the central hub. When emptying the bowl, either remove the metal blade first or hold it in place by placing a finger onto the central hub.
DOUGH BLADE

MIXES and KNEADS leavened dough for bread, brioche, etc.

MIXES and KNEADS unleavened dough for shortcrust pastry, rich shortcrust pastry, etc.

Depending on the quantity, it usually takes less than a minute to knead a batch of dough. Place all ingredients in the bowl and replace the lid before you switch your appliance on.

Fit the dough blade on the motor shaft. It needs to sit at the bottom of the bowl.

Place all the ingredients in the bowl. Put the lid on and turn counterclockwise until it locks into position.

Press AUTO. Switch off as soon as the dough forms a ball or the mixture is sufficiently kneaded.

The dough blade can also be used to stir chocolate chips, dried fruit, etc., into the dough without chopping them. Simply pulse 2 or 3 times.

Never exceed the quantities recommended on p.7.
Check out our useful hints and tips on p.21.
Use the spatula to scrape any remaining flour off the sides of the bowl.
Your bowl must be clean and dry. To allow enough air in, remove the graduated pusher from the lid.

WHISKS egg whites
Put the egg whites in the bowl
Whisk continuously for 5-8 minutes, depending on the number of egg whites.

WHIPS cream
Before you begin, chill the bowl and ingredients in the fridge for an hour. Pour the whipping or double cream into the bowl.
Whisk continuously, keeping a close eye on the cream so that it does not turn into butter.

Make sure you fit the four sections together correctly. Check that the metal shaft has been correctly inserted. It should protrude slightly from the top.

Slot the egg whisk onto the motor shaft. Ensuring it is at the bottom of the bowl. Add the ingredients.

Put the lid on and turn until it locks into place.

When whisking egg whites or whipping cream, remove the graduated pusher from the feed tube to allow more air in.

Check out our useful hints and tips on p.23.
Built to an exclusive, patented Magimix design, the whisk beats the egg whites very gradually, making them stiffer and giving them more volume.
We recommend you use the discs in the midi bowl.

1. Lower the midi bowl into the main bowl. Slide the disc support onto the motor shaft.

2. Position your chosen disc so that the relevant function and thickness code is uppermost.

3. Slot the disc onto the disc support. Turn it counterclockwise until it locks into place (a two-stage process).

4. Slicing/grater discs: each disc is engraved with a code, e.g.
   - R/G4: 4mm grater
   - E/S2: 2mm slicer

5. Make sure you put the discs the right way up. The central plastic part should be pointing downwards.

**WARNING**

- Always handle the discs with caution, as the blades are extremely sharp.
- Never insert a foreign object - or your fingers - into the feed tube. Always use the pusher designed for that purpose.
- Never exceed the recommended quantities (p. 7).

After grating or slicing, you will be left with tiny stubs of food on your discs. This is entirely normal and ensures a flawless end result.
The 2-in-1 feed tube comprises:
1) a large feed tube for round or bulky fruit and vegetables.
2) a small feed tube for small or long fruit and vegetables.

Large feed tube: fruit or vegetables for slicing can be left whole.

Small feed tube: to slice long fruit or vegetables (e.g. leeks, carrots), stand them upright and close together in the feed tube.

The lid is equipped with a safety system which means that your appliance will only work if the bottom of the large pusher is level with the MAX level indicator.

Small feed tube: when grating fruit or vegetables, stack them horizontally for longer shreds.

WARNING
To prevent the disk blade or motor from being damaged, do not add very hard or very frozen ingredients, that is, which cannot be pierced with the tip of a sharp knife.
If a hard piece of food, such as carrot, gets stuck in the disk blade, stop the appliance, remove the disk and carefully remove the piece of food from the blade.

Check out our useful hints and tips on p.22.
After grating or slicing, you will be left with tiny stubs of food on your discs. This is entirely normal and ensures a flawless end result.
ADDITIONAL ACCESSORIES

The accessories you find in the box will vary depending on the model.

**CREATIVE DISC KIT:** 3 novel discs for 3 creative cuts: fluted, julienne and extra-wide julienne.

**CITRUS PRESS:** with a lever arm and 2 cones, yielding juice with no pips and just the right amount of pulp.

**JUICER AND SMOOTHIE MIX:** ideal for making juices, cocktails, smoothies, nectars and coulis.

**SPIRAL EXPERT:** 3 cones to make fruit and vegetables spaghettis, tagliatelles and fusillis.

**OPTIONAL DISCS**

- 6mm grater
- 6mm slicer
- Parmesan
- Julienne
- Wide julienne
- Fluted
- Extra-wide julienne
USING THE CITRUS PRESS

1. Insert the citrus press basket onto the bowl and turn it anticlockwise until it locks into position.

2. Select the right cone for the size of your citrus fruit. The larger cone should always be clipped onto the smaller one.

3. Slide the cone onto the motor shaft. Position the lever arm opposite the locking system and clip the tab to the base of the basket.

4. Position the halved fruit on the cone, pressing down gently.

5. Lower the lever arm, switch your processor on, and apply gentle pressure to the arm until all the juice has been extracted.

6. Switch your appliance off before raising the lever arm, to avoid splashing.

When juicing grapefruit, release the pressure very slightly from time to time, to extract the maximum amount of juice.

Check out our useful hints and tips on p.23.
Always unplug your appliance before you clean it.

**ACCESSORIES:** use a bottle brush to clean inside the accessories.

**MOTOR UNIT:** wipe with a soft, damp cloth.

To preserve the appearance of the detachable parts and make them last as long as possible, make sure you follow these recommendations:

- **Dishwasher:** select the minimum temperature (< 40 °C) and avoid the drying cycle (generally > 60 °C).
- **Washing by hand:** do not leave the parts immersed in detergent for too long. Avoid abrasive products (e.g. stainless-steel scrubbers).
- **Detergents:** read the manufacturer’s instructions to check their compatibility with plastic items.

Never leave parts to soak. Dry them straight after washing.

Make sure you dry the stainless steel parts thoroughly to avoid oxidizing stains. These are purely aesthetic and do not affect the quality of the blades, discs or bowls.

Some food such as carrots tend to stain plastic. Rubbing with a piece of kitchen towel and a little vegetable oil will remove most of this staining.

* Insert a spoon handle into the dough blade hub to push the cap off from the inside. The Compact model’s dough blade does not have a cap.

**Warning:** always handle the blades and discs with caution, as they are extremely sharp.

Never immerse the motor base in water.

* For each mineral salt, we have classified the fresh fruit and vegetables in descending order according to their average content per 3 1/2 oz net. NB: Dried fruit (walnuts, hazelnuts, dried apricots, etc.) are also a good source of mineral salts, especially magnesium, phosphorous and potassium.
Hints & Tips

Golden rules
USEFUL HINTS & TIPS

SIMPLE

- AUTO button: the motor adapts its speed to the task at hand.
- PULSE button: for more control over the end result.
  This is the setting you need for precision chopping or blending.
  Place soft foods (e.g. meat, fish or soft cheese) into the freezer for a few minutes to firm
  them up before chopping, grating or slicing them in your food processor.
  NB. They should be firm, not frozen!

PRACTICAL

- If you want to spend your time using your food processor, rather
  than cleaning it, do the first task in the mini bowl, then move
  on to the midi bowl, and finish off with the main bowl.
  Always start with the hard or dry ingredients and end with the liquid
  ones.
- If your appliance starts to vibrate, carefully wash and dry the feet,
  and check that you have not exceeded the maximum capacities
  shown on p.7.

XL LID

- The small feed tube is ideal for:
  - slicing long fruit or vegetables (e.g. cucumbers, carrots, leeks).
    Stand the fruit and vegetables upright and close together.
  - slicing small fruit or vegetables (e.g. strawberries, kiwi fruit, turnips).
    Introduce them into the small feed tube one at a time.
  - grating long fruit or vegetables (e.g. carrots, courgettes) or chunks of cheese.
    Stack them horizontally in the small feed tube.
- The large feed tube is ideal for:
  - slicing round fruit or vegetables (e.g. oranges, pineapples, apples, pears, mangoes,
    tomatoes, potatoes).
    Either cut them into large pieces before introducing them into the feed tube, or leave them
    whole.
    Make sure you do not fill it beyond the MAX level indicator, otherwise your food
    processor will not start.

MINI BOWL

- The mini bowl is ideal for processing small amounts. Use it to chop onions or herbs, mince
  meat, or whiz up dips, salad dressings and mayonnaise.
- Before chopping fresh herbs, check that both the herbs and the bowl are perfectly clean
  and dry. This will ensure you get the very best results. The herbs will also keep
  for longer.
- You can use the mini bowl directly as a serving dish, providing you
  remember to remove the metal blade first!
MIDI BOWL AND DISCS

• The midi bowl is ideal for grating and slicing fruit, vegetables and cheese. Cabbage: roll the leaves one inside the other after discarding the tough core and slice.
• Some foodstuffs, such as carrots, tend to stain plastic. Rubbing the part with a piece of kitchen paper and a little vegetable oil will remove most of the staining.

MAIN BOWL

• **Liquid ingredients:** never fill the bowl more than a third full and use the BlenderMix.
• **Solid ingredients:** never fill the bowl more than two-thirds full.

METAL BLADE

• **When processing large amounts** of meat or vegetables, cut the food into 2cm pieces.
• If you are chopping **meat or fish**, use the PULSE button to control the end result.
• For **vegetable purées**, cut the cooked vegetables into large pieces before putting them in the bowl with the metal blade. Use the PULSE button first, then switch to continuous mode (AUTO) until the purée reaches the desired consistency.

BLENDERMIX

• **Soups, pancake batters, cocktails:** the metal blade goes in the bowl first, followed by all the ingredients, then the BlenderMix. Your processor is now ready to run.

The BlenderMix attachment gives a smooth volute finish.
DOUGH BLADE

• **Soft dough (brioche, choux pastry, etc.):** Magimix food processors work on the rapid kneading principle. Doughs are kneaded for just 30 seconds to 1 minute, the precise time depending on the amount and type of dough. Follow the instructions carefully for each recipe.

• **Normal dough:** for faster results, leave the dough to rise or prove at (or slightly above) room temperature. As flour is very light, you may sometimes notice a cloud of flour escaping from the bowl. To avoid this happening, put all the non-liquid ingredients (salt, flour, butter, eggs, etc.) in the bowl before adding the liquid ingredients (water, milk, etc.). Only then switch your food processor on.

• You can store dough in the freezer for up to 2 months, providing you wrap it carefully in cling film. Remember to take it out the day before you intend to use it.

EGG WHISK

• Make sure your bowl is clean and dry.

• Remember to remove the graduated pusher from the lid to let in enough air!

• Beaten egg whites: for fluffier egg whites, use eggs that are at room temperature.

• Whipped cream: do not use fat-free or low-fat cream, as it will not whip! Make sure the full-fat whipping or double cream you use is chilled. Place the food processor bowl in the freezer for 10 minutes beforehand. If you can track it down, add some powdered stabilizer (e.g. Whip It®) to the cream, as this will keep it stiff for several hours in the refrigerator. Keep a close eye on the cream while it is being whipped, to avoid over processing and it turning into butter.

CITRUS PRESS

• There are 2 cones: a small one for lemons and limes, and a large one for oranges and grapefruits. The small cone is stored inside the large cone.
GOLDEN RULES

To get the very best out of our recipes, follow these few simple golden rules:

1. **Always use the very best ingredients**

Choose good-quality, fresh ingredients.

The fresher your fruit and vegetables, the more vitamins they will contain. Signs of freshness include smooth skin, green leaves and no bruising.

Always use fresh meat and fish.

Pay attention to the type of flour indicated in the recipe. The choice of flour is very important, not least because the amount of water you need depends on which type you are using. Wholewheat flour, for instance, contains more bran, which absorbs more water.

**Plain flour**, a very fine, white, all-purpose flour that is best for making cakes, pastries, sauces and pancake batters.

**Self-raising flour** has low gluten content and contains a raising agent, usually baking powder. It’s used in baking and cake-making.

**Strong white flour** has a higher gluten content and is therefore ideal for making bread and brioche.

It is better to use caster sugar, rather than granulated sugar, which has coarser crystals. Icing sugar is very fine and is commonly used for cake decoration.

Always use unsalted butter, never margarine or a low-fat spread.

**Yeast** comes in two forms – fresh or dried. In our recipes, we have chosen to use active dry yeast, which you can get from your local grocery store.

**Salt** regulates the rising action of the yeast and reinforces the structure of the gluten.

It is best to use pasteurised whole milk.

**Double cream** has a minimum fat content of 48% (35% for whipping cream), compared with 15% for single cream and even less for “lite” versions. It not only tastes better, but holds air bubbles better when whipped.
**Eggs:** for recipes where the egg whites are to be beaten, bring them up to room temperature first. Eggs must be fresh if they are to be eaten raw in mousses, etc. If you are using them for home baking (e.g. meringues, macaroons), it is a good idea to separate them 1 day beforehand, storing the yolks and whites in separate airtight containers in the fridge. For egg whites to whisk properly, your bowl must be very clean, with no traces of fat.

### 2. Be prepared!

The following pieces of equipment always come in useful:

**Measurement instruments:** a precision electronic kitchen scale (range: from 1 oz to 4 1/2 lb) is vital, as is a cooking thermometer than can measure temperatures of up to 400°F.

**Baking pans:** it is important to use a baking pan of the right shape, the right quality and made from the right material. We specify which kind of pan is required for each recipe.

**Cakemaking accessories:** cutters of different sizes, to vary the presentation of cakes and pastries.

- A piping bag is vital for filling cream puffs and eclairs, as well as making meringues or macaroons.
- You will need a rolling pin for rolling your pastry out and a brush for buttering your pans and painting egg wash on your bread and brioche.

### 3. Precision

In some recipes, especially those for bread and cakes, the instructions must be followed to the letter. Always weigh or measure the ingredients out carefully and respect the kneading, resting and baking times.

### 4. Cooking - the grand finale

How well do you know your oven? The success of your recipe may well depend on it, as the temperatures and cooking times in our recipes are merely there to guide you.

These times may vary according to your oven, but will also depend on how finely the ingredients have been chopped. It will also depend on the size and material of the recipient. This is why we recommend you keep a close eye on the baking process and be ready to adjust the cooking time, if necessary.

Avoid opening the oven door while your dish is cooking.

1. Grate the cheese in the midi bowl with the 2mm grater disc. Set aside.
2. Wash and peel the potatoes. Replace the grater disc with the 2mm slicing disc. Slice half the potatoes, empty the bowl, then slice the other half. Cook in a pan of water for 30-40 minutes (20 minutes in a pressure cooker).
3. Drain the potatoes. Place half of them in the main bowl with the metal blade. Add a little milk and pulse 4-5 times. Add a little more milk if you prefer a softer consistency. Set aside. Repeat these steps with the other half of the potatoes.
4. Transfer to a mixing bowl.
5. Add three-quarters of the butter. Season with salt and pepper. Wait for the butter to melt, then stir in.
6. Preheat your oven to 410°F.
7. Peel and quarter the onions. Peel the garlic. Chop in the main bowl with the metal blade, together with the parsley.
8. Cut the steak into large pieces and add to the onion and garlic mixture in the main bowl. Pulse 3 times, then switch to continuous mode for 1 minute.
9. Heat the rest of the butter and the oil in a frying pan. Fry the meat for 1 minute, stirring constantly. Remove from the heat, stir in the eggs and season.
10. Put the meat in a gratin dish and cover with the mashed potato. Smooth the surface.
11. Scatter with grated cheese and dot with butter. Bake for 20 minutes.
12. Serve piping hot.
1 Cut the lamb into large cubes. Combine thoroughly with the curry powder and allow to marinate for 2 hours.

2 Slice the bananas. Peel the garlic and put it in the main bowl with the metal blade, along with the lamb. Process for 45 seconds. Add the bananas and pulse 2-3 times. Add the eggs via the opening. Season. Blend for a further 20 seconds.

3 Check the seasoning (it should be very spicy!).

4 Heat 2 tbsp oil in a frying pan. Fry the mixture, then cook for 5-10 minutes, stirring constantly.

5 Preheat your oven to 355°F.

6 Peel the paper backing away from the sheets of filo pastry.

7 Lay a small heap of filling in the middle of each sheet. Fold the left side over, then the right side. Next, fold the top and bottom sides up to form squares or triangles. Brush the last flap of pastry with egg yolk to seal the parcel.

8 Place the parcels on a baking sheet lined with baking parchment, with the seam underneath. Brush the top with egg.

9 Bake in the oven for approx. 15 minutes.

10 If the pastry browns too quickly, turn the temperature down.
HAMBURGERS

PREPARATION: 10 min  RESTING: 1 hr  COOKING: 10 min
6 BURGERS

BREAD BUNS
- 2 1/3 cup white bread flour
- 6 oz milk
- 2 tsp of active dry yeast*
- 1/2 oz melted unsalted butter
- 2 tsp sugar
- 1 1/2 tsp salt
- 1 large egg
- 1 egg beaten with 1 tbsp milk (for brushing)
- Sesame seeds (optional)

MINCED MEAT
- 4/5 lb lean beef
- 1/2 red onion
- 1 tbsp olive oil
- Salt & pepper
- GARNISH
- 2 tomatoes
- 1 Baby Romaine
- 6 cheese slices
- Mayonnaise, tomato ketchup

TO MAKE THE BREAD BUNS
1. Warm half of the water up to 100°F and dissolve the yeast. Wait for 5-10 minutes until the solution starts to foam at the top.
2. Put the salt, flour, sugar, butter, egg, remaining water and the yeast liquid in the bowl fitted with the dough blade. Process up to 30 seconds.
3. With floured hands, take the dough out of the bowl, roll it into a ball and place it in a large mixing bowl lightly sprayed with oil. Cover with plastic wrap or a damp cloth. Allow to rise for approximately 30 minutes.
4. Knock the dough down by giving it a few gentle punches. Turn out onto a floured worktop.
5. Divide into 6 equal pieces using a sharp knife A. Shape the dough into smoothtopped buns so that they have a uniform appearance after baking B.
6. Take a shelf out of the oven and line it with baking parchment. Arrange the buns on top, cover with a damp cloth and prove for 30 minutes.
7. Preheat your oven to 380°F.
8. Brush the buns with the egg-and-milk mixture C.
9. Scatter with sesame seeds D.
10. Bake in the oven for 10 minutes, or until golden.
11. Allow to cool before eating.

Chef’s tips: You can replace the sesame seeds with poppy or sunflower seeds. For people with a healthy appetite, make four buns instead of six.
TO MAKE THE BURGERS AND GARNISH

1. Wash the lettuce. Peel and halve the onion. Slice the tomatoes, one of the onion halves and the lettuce in the midi bowl with the 2mm slicing disc. Set aside.

2. Cut the remaining half-onion into pieces, transfer to the main bowl with the metal blade and pulse 5 times.

3. Cut the meat into large pieces. Add to the onion in the main bowl. Pulse a few times - the meat should be minced, not hashed. Season. Pulse 2 more times.

4. Shape the hamburgers with your hands. Fry them in a frying pan with a little olive oil for about 2 minutes on each side.

5. Top each hamburger with a cheese slice. Cover the frying pan until it is time to serve.

6. Make the mayonnaise according to the recipe on p.28, halving the amounts.

7. Split the buns, fill with tomato, lettuce, steak, mayonnaise and ketchup.

8. Eat while they are hot.

Chef’s tips: For even tastier hamburgers, add a slice of bacon to each one. Serve with french fries.
STUFFED TOMATOES

1. Preheat your oven to 355°F.
2. Wash the tomatoes. Remove the top third, or “hat”. Scoop out the flesh with a teaspoon. Sprinkle salt on the inside and place them upside down on paper towel to drain out the excess liquid.

TO MAKE THE STUFFING

1. Soak the bread in lukewarm milk.
2. Peel and quarter the garlic and onions, removing the garlic’s bitter central shoot. Wash and dry the parsley. Transfer to the main bowl with the metal blade. Pulse 3-4 times.
3. Cut the meat into large pieces and add to the main bowl. Process for 20 seconds.
   Wring the bread out and add to the bowl, together with a little of the tomato flesh, the paprika and the salt and pepper.
4. Pulse 4-5 times to achieve an even texture. Check the seasoning.
5. Fill the tomatoes with the meat stuffing. Put their “hats” back on. Arrange in an oven dish and sprinkle with olive oil.
6. Bake for the time indicated in the table.

Chef’s tip: Delicious served with rice or bulgur wheat.

GLOSSARY

B
Bain marie
This gentle cooking technique can be used either on the stove (e.g. for making sauces or melting butter or chocolate) or in the oven (e.g. for baking puddings or custard). It involves placing a heatproof container with the food you want to cook inside a larger one partly filled with water kept at simmering point.

Blind baking
A pastry shell is baked before adding a moist filling in order to prevent the base from becoming soggy.

C
Caul fat
A lacy, fatty membrane that surrounds the intestines of pigs, cows and sheep. Available from traditional butchers, it is wrapped around faggots, patés, crépinettes and even some meat roasts before cooking to keep them moist and basted.

J
Juliennes
Fruit or vegetables cut into thin sticks. A julienne disc is available for your Magimix food processor.

K
Knocking back
In breadmaking, punching all the gas and air pockets out of risen dough to give it a more even texture.

P
Piping bag
A triangular or cone-shaped cloth, plastic or paper bag that can be fitted with a variety of nozzles. It is used for decorating cakes, filling pastries, forming meringues or sponge fingers, shaping duchess potatoes, etc.

Proving
In breadmaking, the dough is left to rise twice. The second time gives the yeast a chance to “prove” that it is still alive and improves the texture of the bread.

R
Reduction
A liquid (e.g. syrup, stock or sauce) is simmered over a moderate heat, causing some of the water to evaporate, in order to thicken it and/or concentrate the flavor.

Rice flour
Widely available in supermarkets, this gluten-free flour is useful for thickening stews and sauces.

Roux
Used to thicken soups, sauces and gravies, a roux is a mixture of equal parts of flour and fat (often butter) cooked over a low heat.

Y
Yeast
Dried yeast is widely available and keeps for up to six months.
