CAUTION:
- BEFORE INSTALLING FIXTURE, MAKE SURE THE POWER TO THE CIRCUIT IS TURNED OFF AT THE MAIN FUSE BOX / CIRCUIT BREAKER UTILITY BOX.

Important Safety Instructions:
- These instructions are provided for your safety. It is very important that they are read carefully and completely before beginning the assembly and installation of this lighting fixture.
- We strongly recommend that a professional electrician install all direct wire fixtures.
- THIS PRODUCT MUST BE INSTALLED IN ACCORDANCE WITH THE APPLICABLE INSTALLATION CODES BY A PERSON FAMILIAR WITH THE CONSTRUCTION AND OPERATION OF THE PRODUCT AND THE HAZARDS INVOLVED.
- The lighting fixture is meant for indoor use. It must be connected only to 3-wire, single-phase electrical supply systems (provided with Ground wire or equivalent protection system).
- For your safety, it is strongly recommended that two people install the lighting fixture.
- This fixture has been rated for up to sixteen (16) 40-Watt maximum TYPE B standard candelabra incandescent light bulbs (not included) or sixteen (16) 9-Watt compact fluorescent light bulbs (not included) or sixteen (16) 4.5-Watt SBLED light bulbs (not included). To avoid the risk of fire, do not exceed the recommended lamp wattage.
- The lighting fixture is meant for indoor use, DRY LOCATIONS ONLY.
- Save these instructions.

WARNING:
- To reduce the risk of fire, electrical shock or personal injury, always turn off light fixture and allow it to cool prior to replacing light bulb.
- Do not touch bulb when fixture is turned on. Do not look directly at lit bulb.
- Keep flammable materials away from lit bulb.
- This lighting fixture contains lead, a chemical known to the State of California to cause cancer, birth defects and other reproductive harm. Wash hands after installing, handling, cleaning or otherwise touching this light fixture.

Pre-assembly:
- Remove all parts and hardware from box along with any plastic protective packaging.
- Do not discard any contents until after assembly is complete to avoid accidentally discarding small parts or hardware.
- For your safety and convenience, assembly by two people is recommended.
TOOLS REQUIRED (not included):

Parts Included:
(A) Mounting Plate (1)
(B) Canopy (1)
(C) Canopy Nut (1)
(D) Mounting Loop (1)
(E) Threaded Tube (1)
(F) Fixture Loop (1)
(G) 7" Connection Poles (2)
(H) 13" Connection Poles (2)
(I) 19" Connection Poles (2)
(J) Threaded Joint (1)
(K) Allen Wrench (1)
(L) Glass Shades (16)
(M) Hex Nut (1)
(N) Lock Washer (1)
(R) Set Screws (16)
(S) End Caps (16)
(T) Metal Clips (16)

Hardware Enclosed:
(O) Mounting Screws (2)
(P) Plastic Wire Nut Connectors (3)
(Q) Green Ground Screw (1)
To adjust the suspension length of the fixture:

Note: The adjustment or shortening of the lighting fixture’s suspension length is only needed if the factory set length is not appropriate for your installation. We recommend that you adjust the lighting fixture to the proper desired length before cutting the electrical cord. Determine the lighting fixture suspension length from the ceiling for the product installation, allowing the extra cord length for the outlet junction box wire connections as noted below.

1. (See A1, A2 & A3) Thread the fixture 2 wire cord, bare copper wire through the 19” Connection Pole (I), making sure the threaded nipple end of the 19” Connection Pole (I) is downwards. Attach the bottom end of the 19” Connection Pole (I) onto the Threaded Joint (J) by rotating clockwise until tight. Use the Additional Tubes (G/H/I) as needed, to adjust the fixture’s suspension length by following the procedures as shown in illustration A2&A3.

2. (See A4) If needed, cut off the extra power cord length on the 2 wire cord and bare ground wire so that they all are at least 6 inches (152.4 mm) long within the outlet junction box (J-box).
Assembly & Installation Instructions:

- **SHUT OFF THE MAIN ELECTRICAL SUPPLY FROM THE MAIN FUSE BOX/CIRCUIT BREAKER.**
- Carefully unpack all fixture parts and hardware and lay them on a clear workspace.
- If the parts are not already preassembled or if suspension length adjustments were not made, please use the instruction section above “To Adjust the Suspension Length of the Fixture” for the proper assembly of the Tubes (G&H& I) to the desired suspension length.

1. Slide the Canopy Nut (C) over the upper end of 7” Connection Pole (G)
2. Slide the Canopy (B) over the 7” Connection Pole (G).
3. Feed the fixtures 2 wire cord, bare copper wire through Mounting Loop (D) and Threaded Tube (E).
4. Hang the Fixture Loop (F) onto the Mounting Loop (D) until secure.

1. Attach the Threaded Tube (E) into the threaded bore of the Mounting Loop (D) and rotate the Threaded Tube (E) clockwise until it is tightly engaged within the Mounting Loop (D).
2. Attach the Mounting Plate (A) onto the top end of the Threaded Tube (E) so that a portion of the Threaded Tube (E) extends beyond the Mounting Plate (A).

Position the Lock Washer (N) first and then the Hex Nut (M) onto the top end of Threaded Tube (E). Tighten the Hex Nut (M) until tight using pliers so that the Mounting Loop (D) is now firmly secured to the middle of the Mounting Plate (A).
Please read the section “To Make the Wire Connections” Below.

Attach the Mounting Plate (A) onto the junction box using two Mounting Screws (O), tighten each screw with a screwdriver.

Slide the Canopy (B) upward along the Connection Pole (G) until the upper rim of the canopy pressed gently against the ceiling surface. Position the Canopy Nut (C) against the Mounting Loop (D) and rotate the nut clockwise to engage it with the threaded portion of the Mounting Loop (D) until secure. Do not over tighten this nut.
To Make the Wire Connections:
1. Gently pull existing wire down from the ceiling junction box and allow wires to hang. The HOT or LIVE wire is usually black. The NEUTRAL wire is usually white. Check to see if there is a ground wire that is usually green or green with a yellow stripe or exposed copper metal wire. If needed, use a pair of wire strippers to remove about 1/2 inch of insulation from each wire.
2. Carefully inspect the fixtures wires. The NEUTRAL FIXTURE WIRE has FINE LONGITUDINAL RIDGES running along its length. The HOT FIXTURE WIRE is SMOOTH and the BARE COPPER WIRE is the GROUND WIRE. If you have any doubt and cannot identify the power-supply wires with confidence, then we recommend that you ask an electrician and that you not continue with the installation.
3. With the help of another person to hold the weight of the fixture, attach the fixture wires to the junction box wires as shown in the illustrations.
NOTE:

IT IS IMPERATIVE THAT THE JUNCTION BOX IN YOUR HOME BE PROPERLY GROUNDED!
DO NOT REVERSE THE HOT AND NEUTRAL CONNECTIONS OR SAFETY WILL BE COMPROMISED.

4. Check the wiring connections and if all looks good, gently tuck the wire connections neatly into the ceiling junction box.

Care instructions:

• Wipe clean with a soft, dry cloth or static duster.
• Always avoid the use of harsh chemicals or abrasive cleaners as they may cause damage to the fixture’s finish.

Thank you for your purchase
